

Alteza Media Package

Marantz 1501 Surround Receiver

Capable surround sound receivers have to be intimidating, don't they? If that's your impression, allow the new Marantz NR1501 to change your mind. Here's a svelte, competent performer with the features and flexibility you need. But without the hulking size you don't. This one's designed for the way you live. So do that large by thinking small. The NR1501. From Marantz, of course.

- 7 ch Discrete Analog Amplifier (50 watts x 7) in Slim Design Chassis
- HDMI 1.3 x4 Inputs / x1 Output
- Decoding of Dolby TrueHD, dts-HD Master Audio
- Video Converter for All Analog Sources to HDMI
- Independent Audio Board for Improved Sound
- Simple Set-up with MRAC Auto Calibration
- Component Video x3 Inputs / x1 Output
- Analog Audio Inputs x5, Digital Audio Inputs x3
- Marantz Remote D-Bus In/Out Jacks
- Detachable Power Cord
- On Screen Display for Setup through HDMI out
- Glow Key, Precode Remote Control
- Available Option Rack Mount Kit [RMK1501](#)

Quick . . . where are you going to put that surround sound receiver? Under a coffee table? In a closet? Maybe in the next room? Alright, we're exaggerating a bit. But you get the point. Most surround receivers today are huge. They take up a lot of space. Yes, you can opt for a "compact" system with sub-par performance. But why compromise? Marantz's NR1501 answers your needs for both décor-friendly size and superb performance. That's because the NR1501 includes everything you need in a chassis that fits comfortably on a normal shelf or in a standard cabinet. It's just a bit more than 4" high and 13" deep so there's plenty of room for the cables

you'll need to connect it to your flat-screen TV, a Blu-ray player, cable box, your favorite game console, a surround speaker system, and more.

The NR1501 looks the part, too, thanks to a contoured front panel that combines aluminum and glass-reinforced resins for maximum shielding, dimensional stability, and sophisticated styling. Behind that panel are the features you need to enjoy the best home entertainment sources today. To begin with there are four HDMI inputs, all version 1.3-capable, of course. That means you'll enjoy both today's – and tomorrow's – video sources with stunning clarity and definition. The HDMI inputs are part of a comprehensive system that goes beyond mere switching capability.

That's because the NR1501 includes decoding for advanced audio formats like Dolby TrueHD and DTS Master Audio, to name just a few. The NR1501 doesn't forget older sources either. There's a built-in video A/D converter so you can enjoy your favorite composite and component videos on your flat-screen TV through the HDMI input. And a wideband 3-in/1-out component switcher for analog-only connections.

As you might expect from Marantz, the audio circuitry matches the video side for sophistication. The carefully-optimized audio signal path rests on a separate circuit board for maximum performance as well as isolation from the spurious interferences generated by high speed video processing. The very efficient seven channel in-line amplifier benefits from voltage feedback for enhanced linearity. The NR1501 makes it easy to get the best high definition sound to your ears with an automatic calibration process that:

- Identifies your system's speaker complement
- Measures the distances between your speakers and your favorite viewing/listening position for the most accurate delay settings
- Adjusts relative speaker levels for the most natural surround effects
- Determines the proper speaker crossover settings for the smoothest transition from your wide range speakers to your subwoofer
- Analyzes your room's acoustic properties and corrects for their often-negative impact on the sound you hear

Let's not forget the handy front panel 3.5mm connector that lets you add your iPod or other portable device as another source of enjoyment. Or the on-screen display menu that makes system setup a breeze. And a full-function Glo-key remote includes preset codes for Marantz Blu-ray players so you can operate the heart of your system without searching for another remote.

The Marantz NR1501. Fully in touch with your expectations. And fully Marantz.

Universal Remote PSX2 IPOD Dock and Media Server

PSX-2 Personal Server from URC – loaded with features that allow you the installer to totally customize your client's iPod experience. Never before has there been an iPod dock with this level of incredible two-way functionality and hundreds of discrete IR commands.

The popularity of the Apple iPod is such that almost every home entertainment system now has an A/V iPod dock. The most popular docks provide a TV on-screen GUI (Graphical User Interface) that mimics precisely the iPod screens. But because the iPod is based on a limited number of buttons and a small screen, one must constantly navigate up and down through a series of nested menus, and must remember a "mental map" of where special features are accessed. This is tedious and frustrating and the only way around it was an expensive media server instead of an iPod dock. Until today...

The PSX-2 is an AV iPod dock with built in automation for the iPod that provides high-end music server functionality via any programmable control system and a TV. Enables functions like play more from this artist, shuffle my jazz, alphabetically search and the intuitive ability to create a play list for a party from any keypad or remote control on their TV set.

- ☑ Browse on screen (MX-6000 or TV)
- ☑ Automate via proprietary features
- ☑ Customize – hundreds of discrete codes
- ☑ Compatible with all URC remotes

On TV Content Selection and Browsing with Cover Art

Having cover art, artist and title information on the TV is convenient, fun and natural. It provides the interface for any control system to display content selection choices.

Synchronize iPod Content with PC or Mac

The PSX-2 includes PSXLink software for both Macs and PCs. Any new content you add to your iTunes library can be synchronized to the iPod in the PSX-2 without ever removing it.

TV Screensaver Always Displays Cover Art and Artist & Track Info

With other music servers, screen savers force you to press a button to view the Cover art, Artist and Track info. PSX-2 utilizes your album cover art and now playing info in the screensaver mode. Now you can see what's playing on TV without pressing a button, and without risking burn in on your Plasma TV!

Customize & Automate iPod Operation in any System

Now, all systems with programmable remote controls or keypads (regardless of brand) can enjoy the unique automation and customizable experience.

Play More From any Artist, Genre...

Imagine exploring all the hard rock albums of your youth with Shuffle Genres. When you hear a song you love, instead of having to browse through the hundreds of artists in your collection, you simply touch the "Play More From" button. The remote control or keypad displays the choices instantly, without any tedious up, down, left right navigation through endless menus...

Shuffle Genre, Artist, Album, Composer

With other music servers, shuffle is a frustrating mix of too many kinds of music. With the PSX-2, shuffle becomes a powerful tool for listening and exploring your music collection. Imagine shuffling just your jazz, or just the songs of a particular artist. You can shuffle play any genre, any artist or any album at any time by simply accessing the remote control or keypad's shuffle screen.

Personal Browsing with Cover Art on MX-6000

You won't disturb anyone else in the room when you browse with MX-6000. Your family can be watching anything on TV, while you can build playlists, navigate and explore content personally on the screen of your MX-6000. In fact, there is no need to even turn the TV on when listening to music, a real plus for those with high performance audiophile systems where TV is an anathema!

Build Playlist for Parties

Arranging the perfect music to playback for any event is a delightful activity with the PSX-2. You can freely play music, browsing and shuffling as you like. When you hear something you'd like to add to your Jukebox playlist, simply touch "Add Song to Jukebox" or "Add Album to Jukebox" on the Jukebox screen. To play the jukebox you've created, simply touch "Play Jukebox."

Alphabetically Search

By entering a single letter, your clients can quickly navigate long lists of songs, artists, albums, genres, playlists, movies, TV shows or videos. Of course if they are looking for someone or something specific they can enter as many letters as they like to narrow down the search results.

Specifications

- Size: 6.75" x 5" x 1.6" (W x D x H)

- Weight: 15 oz
- Memory: Microcontroller: 166MHz ARM922T
Flash memory: 16Megabit
RAM: 64Megabit SDRAM
- Range: IR (line of sight) -20-30' depending on the environment.
- IR Flasher: Rear Panel IR Input: Compatible with all Complete Control MRF and MSC base stations
- Network: 10Base-T/100Base-TX network connector
- Video: 3 RCA Component video output connectors (Y/Pr/Pb)
- Audio: 2 RCA audio output connectors (L + R)
- Warranty: 1 year parts & labor when purchased from an authorized dealer

Universal Remote MX880z

ZigBee RF Technology

The MX-880z is a wand-style ZigBee RF (radio frequency) and IR (infrared) hard-button remote control with a two-inch color LCD screen. ZigBee allows the integrator to install as many remotes as required, each with its own unique ZigBee network ID instead of competing for assignable RF frequencies.

Color with CCP Programming

Color Graphics, But Text Based,

The 2" (176 x 220) pixel screen is populated with colorful backgrounds and icons automatically. When programming, the installer focuses on text label customization instead of arranging icons. Any button can be dragged and dropped to any position via the power of Complete Control Program.

Fast, Structured Programming

Instead of reprogramming a similar system, programmers can freely import codes and macros from MX-900 files via Device Import, or simply open an MX-900 file in Complete Control Program (CCP).

When starting from scratch, Complete Control Program (CCP) enables the installer to start a new project with any template. By following the steps of the Program Menu, the installer quickly creates a finished working setup. Once tested and refined, the installer can freely experiment with any of the Color Graphic themes without affecting the setup.

Powerful Macro Programming

Macro programming in Complete Control Program (CCP) enables the installer to freely create sophisticated status screens in macros, since there is no limit to the number of page jumps inside a macro. With the ability to nest a macro inside another macro, an installer can create a complex routine, label it descriptively and simply alias to it in one step. Variables can be used to track power status, rooms, or to create options that change in all macros based on one button press by the user.

standard.

To further reinforce its commitment to the ZigBee technology, URC also announced today that it has joined the ZigBee Alliance, an association of companies working together to enable reliable, cost-effective, low-power, wirelessly networked, monitoring and control products based on an open global

Specifications

- LCD Size: 2" Active Matrix color LCD
- Size: 8. 13/16" x 2.25" x 1 1/16" (H x W x D)
- Weight: 6.9 ounces (with battery loaded)
- Learning Capabilities: Standard frequencies (15kHz to 460kHz)

Universal Remote MSC 400

The most important component you will never see!

So that you can obtain the maximum benefits of your home control system, your installer may recommend a system controller, especially if your set-up is larger or more sophisticated than average. System controllers are components that transparently receive radio frequency (RF) commands through walls, doors, and floors from your remote to operate your components. With a system controller like the MSC-400 orchestrating your equipment, you no longer have to point the remote at your equipment to operate it. In fact, the MSC-400 can execute some commands without the need for any remote controls.

You will be amazed by the feats of magic the MSC-400 can perform. As is true with any URC base station, with it you can centralize and store the equipment for an entire house behind closed doors in a cabinet. It gives you the ability to turn off all of the TVs in the house at the touch of a single button, or adjust the volume of your music while you are out on the patio.

A system controller is more powerful than a simple base station, however. Imagine your child switching on their favorite game console and the MSC-400 responding by automatically turning on the TV, Audio Receiver and changing to the correct inputs automatically. Or plugging in the family camcorder and watching while the MSC-400 configures your system to watch a home movie.

Experience the freedom of control without boundaries in your home with the MSC-400 operating your equipment. With the award winning MSC-400 and a compatible remote you can enjoy complete control over any component anywhere in the house.

Experience the Wonder of 3D at Home

Bring the wonder of 3D straight to your living room with groundbreaking technology from Samsung. Our new 3D TVs add a whole new depth and

dimension to scenes to create a completely jaw-dropping experience. Samsung 3D Active Glasses sync up with your 3D TV to produce 3D images, allowing you to watch movies and TV with action that leaps right off the screen. Even your favorite shows can now be transformed to 3D in real time. Discover a new dimension in TV with Samsung 3D technology.

Samsung redefines slim with TVs so thin and elegant, they flatter any room.

Energy Efficient Plasma

Samsung Plasma TVs make it easy to save energy and do your part to save the planet. Our current Plasma televisions not only meet ENERGY STAR® 4.0 standards—they exceed them by being up to 26% more efficient than ENERGY STAR's minimum requirements. So you'll save energy, lower your utility bills and leave a smaller carbon footprint. Samsung Plasma televisions set a new standard in eco-efficiency.
